Squirrel says,

*Hello Friends,
here's how to use this
week's free gift.*

Next week you'll get the stickers so you can make funny faces for Adder and Rollo on your sticker board.

HOW TO TAKE OUT A SUBSCRIPTION

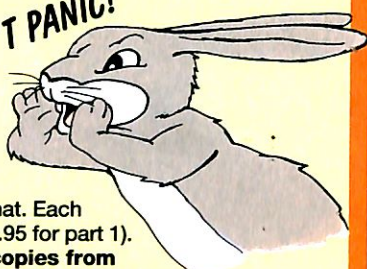

(For readers in UK and Republic of Ireland only)
We'll deliver Farthing Wood Friends to your door every week AT NO EXTRA COST.

Simply write to: Farthing Wood Subscriptions,
PO Box 1, Hastings, East Sussex TN35 4TJ or
telephone 01424 755755.

You may order as many copies as you like but we suggest a minimum of 12 parts. Please include payment with your order and be sure to state the part number of the first copy you want. You can pay by cheque, postal order or credit card.

*If you haven't got
all your copies of
Farthing Wood Friends*

DON'T PANIC!

Videos are available with parts 1, 5 and every fourth part after that. Each part with a video costs £5.95 (£2.95 for part 1). **Whether you're getting your copies from your newsagent or having them sent direct to your home, please be sure to state whether you want video or non-video versions of these parts when ordering.**

You can calculate the amount to pay for your subscription by multiplying the cover price by the number of parts required: for example 12 parts without the video x £1.20 will cost £14.40, or 12 parts with video (3 video parts at £5.95 and 9 non-video parts at £1.20) will cost £28.65. You can also order back numbers from the above address. Postage and packing are free.

OVERSEAS

Subscriptions are available in Australia. Either telephone (03) 872 4000 or write to: Farthing Wood Friends, MC Box 460, Eastern Mail Centre, VIC 3110 enclosing a cheque/money order for the cover price x the number of parts you wish to subscribe to (minimum 12 parts \$47.40 without videos or \$74.40 with videos every fourth part).

KEEPING YOUR COPIES TIDY

You can get a Tidy Box to keep your copies in. Each box holds 26 copies and costs £5.95. Just ask a grown up to write to the above address, stating the number of Tidy Boxes you want and enclosing the payment. Postage and packing are free.

HOW TO PAY

You can pay by cheque, postal order or credit card. Cheques or postal orders should be payable to Woodgate (Eaglemoss) Ltd. If paying by credit card, be sure to state the cardholder's name, type of card (Access or Visa), card number and expiry date. You can phone your order on 01424 755755.

Customer enquiries: 01424 755755

TALES OF FARTHING WOOD

The Farthing Wood animals have an uneasy feeling that trouble is on the way.

ALL ABOUT...Polecats

These rare, masked mammals are related to Stoats and Badgers.

CHRONICLE 12

Kestrel asks a honey bee to explain the meaning behind its dance.

DISCOVERING NATURE

Check your rubbish before you put it in the bin.

HOW TO DRAW

There's a theory behind colour, and we show you how to put it into practice.

SECRET WORLD OF...

River conservancy

A river that is completely choked by rubbish can be revived by volunteers.

PUZZLE IT OUT

You'll be fooled by our fishy puzzles, when we go salmon watching.

Having been humiliated by the otters, Lean Vixen decided to seek revenge. She placed poisoned voles outside their homes, which the otters duly ate. Now they were fighting for their lives ...

Chapter 3: Changes

The otters were desperate to find a cure for the sickness. Some of the cubs were failing fast and Sleek Otter was at her wits' end. One of the females told her to seek Smooth Otter's advice.

Smooth Otter greeted her gravely. "I can guess why you're here. The problem is, we otters have not been eating any of the water plants," he told her. "Small quantities of cress taken with our usual food – fish – kept us healthy. Look for them where the river runs clear."

Sleek Otter whistled with new hope as she dived into the stream and paddled against the current. When she had found the place, she tore off mouthfuls of the deep green leaves with her teeth.

"I'm coming my babies, I'm coming," she murmured, as her body rippled through the water. She swooped up from the stream into her dry holt entrance and scattered the plant stems by the still bodies of her cubs. "You must eat this," she said. "Please eat!" But it was too late. Lean Vixen had got her revenge.

Other youngsters had died. But some of the stronger adults, who had eaten the plants, survived. They were so grateful to Smooth Otter for his advice that they began looking on him as their leader.

After the scare, the otters tried once more to rely on their normal diet of fish, but soon these prey were almost exhausted again.

"We have no choice – we must return to the woods," Smooth Otter said. "The woods are dangerous," another male argued. "Do we want to poison ourselves again?"

Smooth Otter's whiskers twitched. "We have no alternative but to hunt where the foxes, stoats and weasels catch their prey. *They're* not sick. So we watch what they catch and then –" he whistled – "we take it from them."

The other otters were not convinced, and asked how they would win a fight with a fox. "When they've made a kill, we'll rush in and whisk it away before they know we're around," Smooth Otter explained, with confidence.

Meanwhile, the other Farthing Wood hunters thought their problems were over. Lean Vixen and Sly Stoat had congratulated themselves on their clever plan. As the snow melted and spring arrived, prey was easier to find, and the animals began to pair off.

Stout Fox was tracking an old rabbit, when he saw a stout-looking vixen. "She looks as though she's looked after herself over the winter, perhaps she'd be a suitable mate," he thought.

He gave up hunting and lay down to watch her tactics with the rabbit. She began to chase her tail while the old buck rabbit sat entranced. Stout Fox grinned as he saw the rabbit puzzled, but unafraid. The vixen twirled around, coming closer and closer without the rabbit suspecting anything. Suddenly, she pounced and, before the rabbit knew what had happened, he was dead.

"Bravo!" barked Stout Fox, as he rushed forward. "A fine example of skill. Where have you been hiding? I don't think we've met before."

The vixen guarded her kill in case Stout Fox was trying to trick her. "I don't hide," she replied, coolly, "but I cover a lot of ground." She saw Stout Fox eyeing the rabbit, "Are you hoping to share my food?" she asked.

"No, no. I was merely admiring what I saw," he replied. "Well, after all," she said in a more friendly tone, "there's more than enough for one. Do you have a den? Mine's a long way off." The pair wandered off together to enjoy their meal in comfort.

But all was not to be quiet for long. Sly Stoat was the first to fall victim to the otters' tactics. Smooth Otter snatched a shrew from the stoat.

"Easy come, easy go," the otter sneered at the stoat, who was too stunned to react.

"Any of us can get the better of an animal the size of a stoat," said Slow Otter, making Smooth Otter drop the shrew. "What about a fox?" he asked.

Smooth Otter was stung into action; he was determined to prove himself. He went off, leaving Slow Otter to follow. After a while of wandering aimlessly, Slow Otter stopped. He was hungry and lost. Suddenly, there was a tremendous commotion elsewhere in the Wood. The barking and shrieking made it sound like a serious fight. He raced over to see what was the matter.

When he arrived, the fighting was nearly over. Smooth Otter and Lean Vixen were tugging at a pheasant. With a final wrench, the vixen tore the body loose and Smooth Otter was left with only the pheasant's head in his mouth.

"You stupid animal," Lean Vixen snarled. "Do you plan to pull food from our jaws? Try those tricks again and we foxes will drive you from the Wood!"

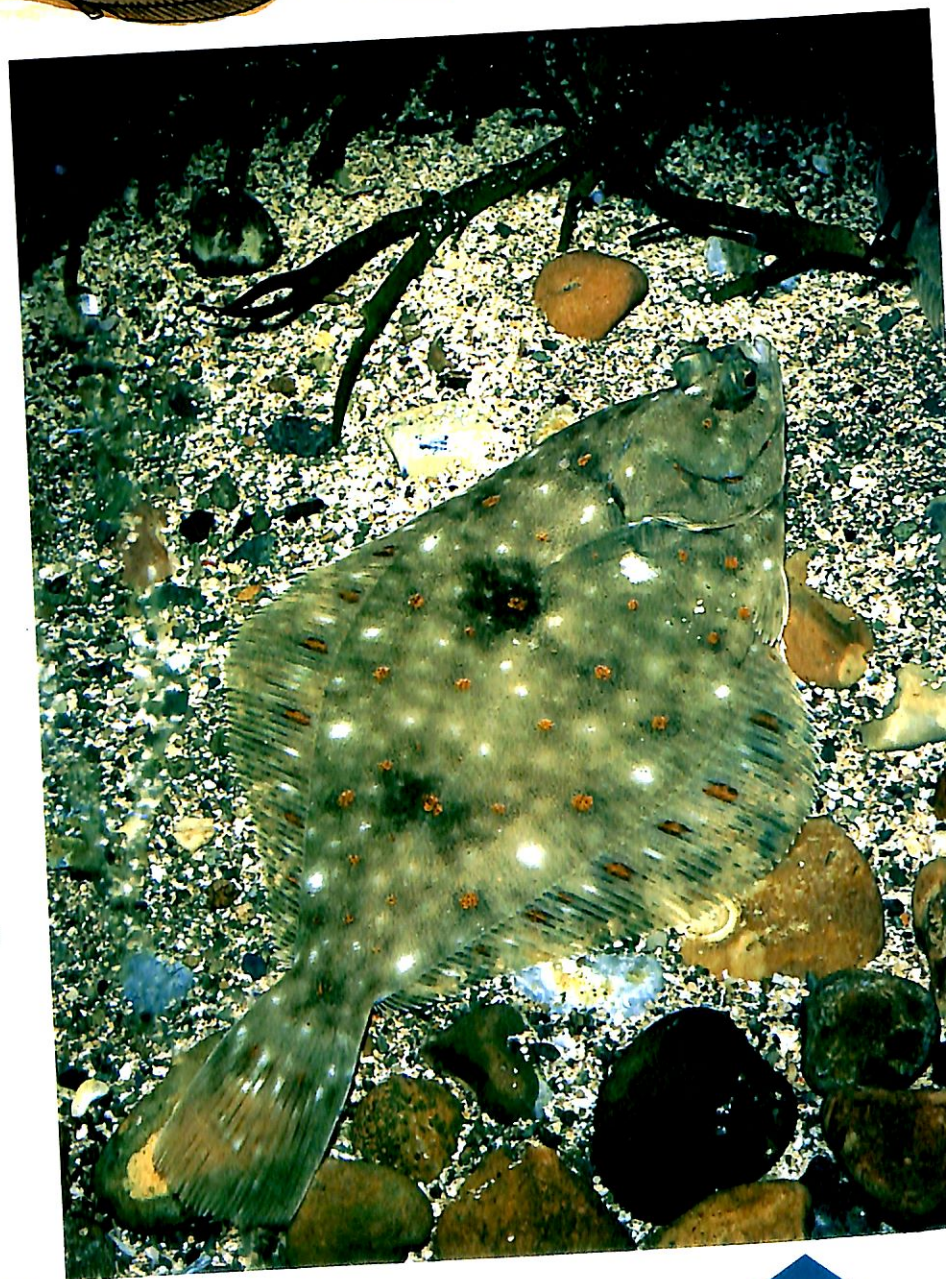

It was Smooth Otter's turn to feel humiliated and he turned to go. "I won't give up that easily," Smooth Otter vowed, grimly.

All About...

FLATFISH

“Hi! My name’s Plaice and I’m one of 24 different kinds of flatfish that you might find in the seas off Britain and Ireland. We should really be called sidefish. When you look at my spotted side you probably think that’s my back. In fact, it’s one of my sides – even though it’s got two eyes on it.

Most of us flatfish lay our eggs at sea and spend the first weeks of our lives near the surface. But then we sink down to the seabed and feed on small creatures that live on the bottom, like cockles, razor shells, bristleworms and sandhoppers. We Plaice stay quite close to the shore for about four years and then we swim off to deeper waters.”

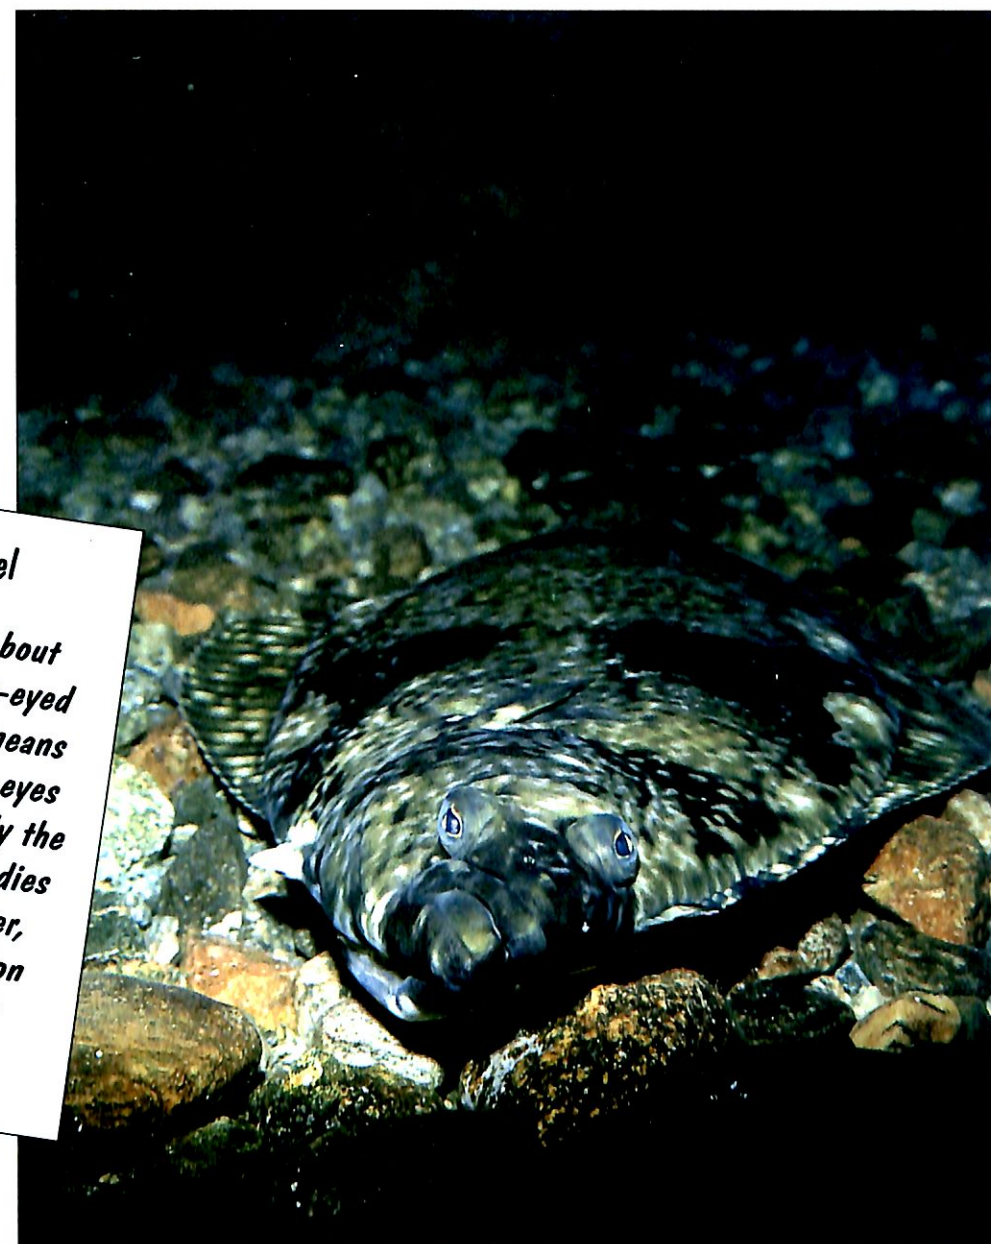

You can recognize us Plaice by our orange spots. Our skin is smooth, but we have a row of bony knobs curving away from our eyes. My upper side is brown and my underside is usually white. I have sharp teeth in my mouth, which I use to bite off the soft feeding tubes of certain shellfish. More teeth in my gullet help me to crunch up thin-shelled creatures like razor shells and tellins. We grow slowly – most of us reach 50–60cm (that’s if we’re not caught by fishermen before we’re fully grown). We can live for up to 30 years.

The Atlantic halibut is the largest flatfish in the Atlantic, reaching 2.5m or more. It prefers cold temperatures and often sinks down to deeper waters to keep cool. It is usually greenish-grey with a white underside.

Its jaws are large to cope with the crustaceans, molluscs and fish it feeds on.

Weasel's Easel

Naturalists talk about flatfish being right-eyed or left-eyed. This means that they have both eyes on what was originally the right side of their bodies (like Plaice, Flounder, halibut and sole) or on the left (like turbot and Brill).

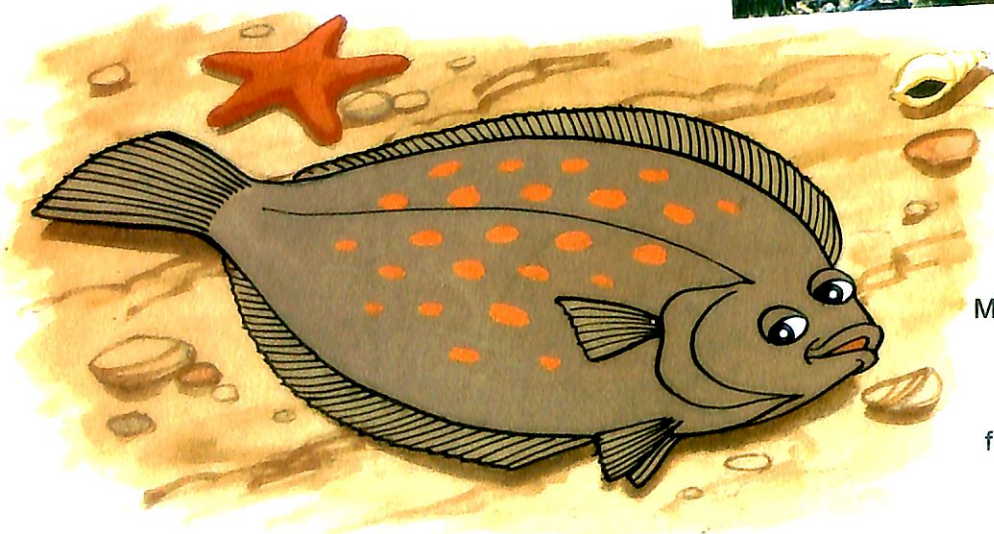

This yellowish-brown Norwegian topknot is the smallest flatfish off British coasts, growing to only about 12cm. Its blotchy markings help to camouflage it against rocky, pebbly backgrounds, so it is quite difficult to spot. If you do catch one, you’ll discover that its scales are rough.

IT'S
Amazing!

NEW RECORD

Fishermen caught a giant Plaice in their nets in the English Channel in June 1994. It measured nearly 1m and weighed a record-breaking 9.3kg.

Becoming flat

“When our larvae hatch out of their eggs, they are shaped just like other young fish, with one eye on each side of their body. But over a period of a few weeks, their shape changes completely. Their bodies look as if they have been put between the pages of an extremely heavy book, with their sides touching the pages, and flattened. There's one big difference, though. Instead of having one eye on each flattened side, we end up with two eyes on the same side and none on the other. This means that when we are lying on the seabed, we can see everything above us clearly. How does this happen? Well, one eye actually moves across the body to join the other.”

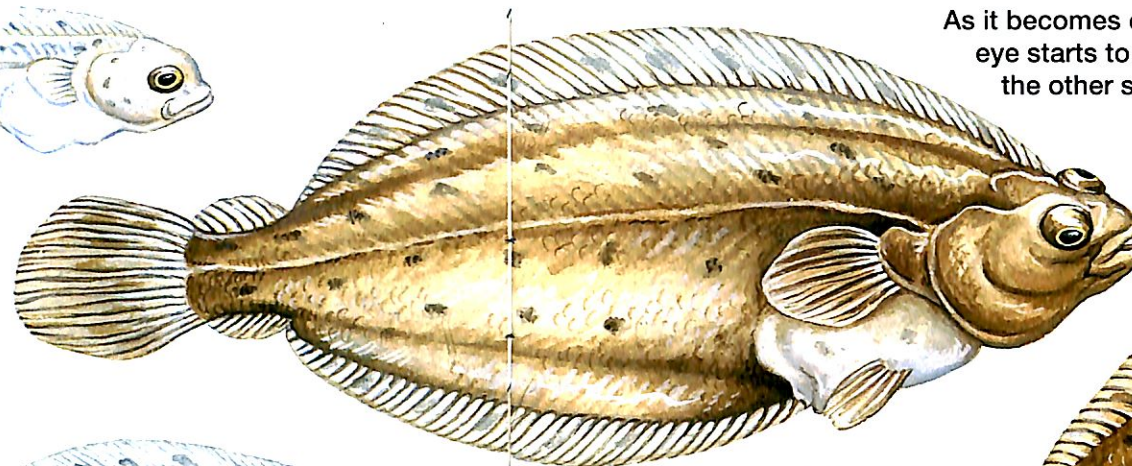

From fry to flatfish

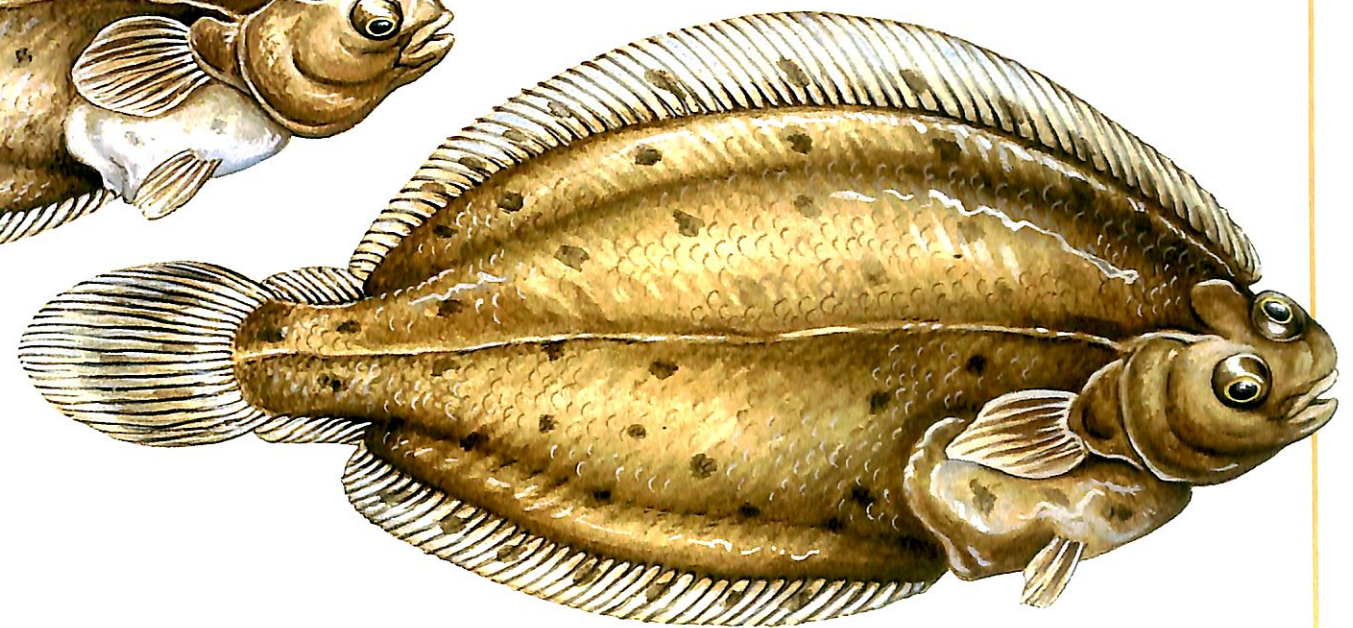

Female Plaice lay up to 500,000 eggs between December and April. After about three weeks of floating about on the surface, the eggs hatch. The newly hatched larva is about 6mm long. It is transparent and feeds on plankton.

It has reached about 10mm by the time it is eight weeks and has already started to change shape. Its body is deeper and flatter.

As it becomes even flatter, one eye starts to move across to the other side of the body.

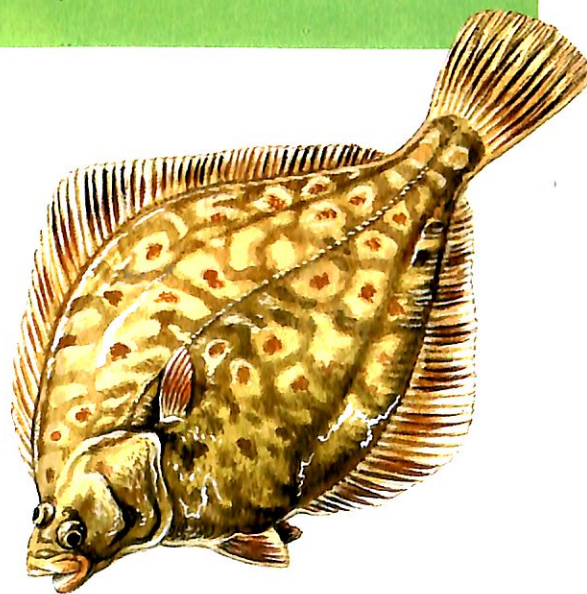

By the time both eyes are on the same side, the young Plaice is ready to swim like the adults, with what used to be the left side of its body facing the seabed. It is about 16mm long. The upper side of its body is brown and has not yet developed orange spots.

Be a Nature Detective

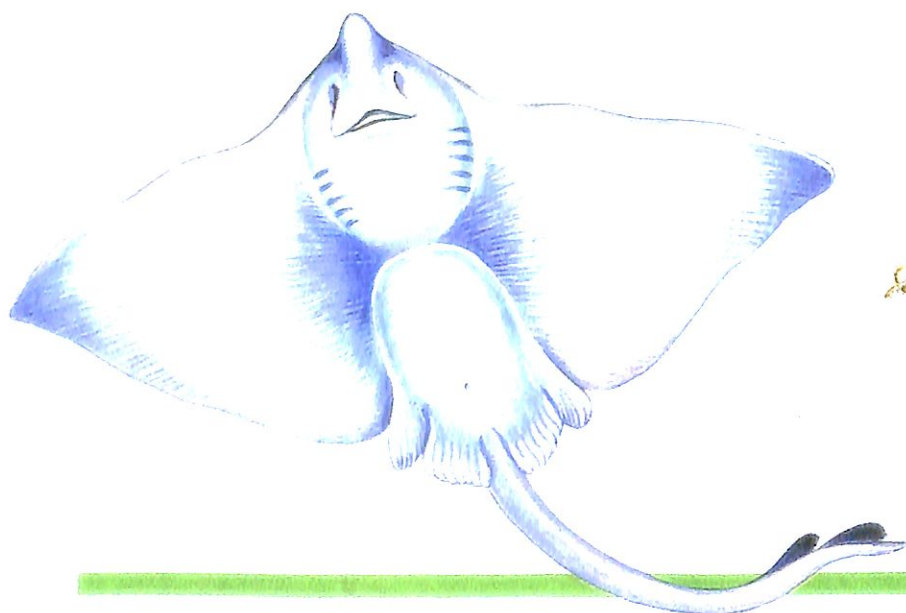

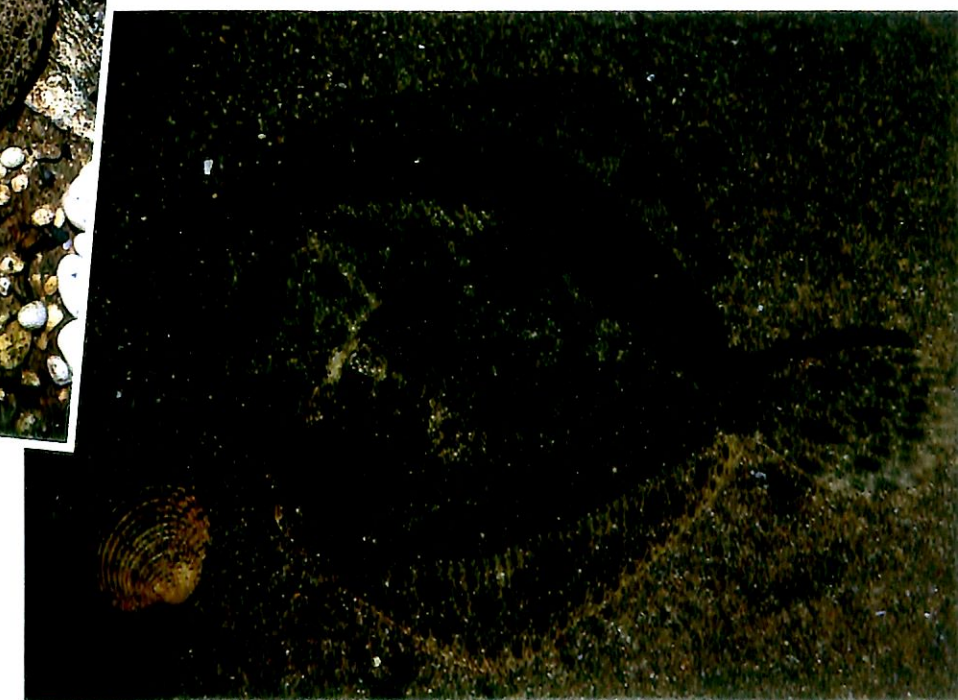

NOT ALL FLAT FISH ARE FLATFISH

Although fish like skates are flat in shape, they are different to flatfish in being flattened from above and below. They emerge from their egg-cases shaped this way. If you came face to face with a ray underwater, you would see that its mouth is a horizontal opening on the underside of its body. The mouth of a flatfish, like this Flounder (right), is a vertical opening at the end of its face.

The turbot is shaped like a dinner plate. Like the Brill, it can change its skin colour. It spends most of its time in sandy or gravelly parts of the sea, but it can also live in the brackish water of estuaries. Instead of scales, it has a covering of bony humps, called tubercles.

The Brill has a broad body. It is usually brown, with lighter and darker blotches and speckles. Scientists have discovered that it can change the colour of its skin to blend in with its background in just 60 seconds. It does this by expanding or contracting the cells in the pigment of its skin.

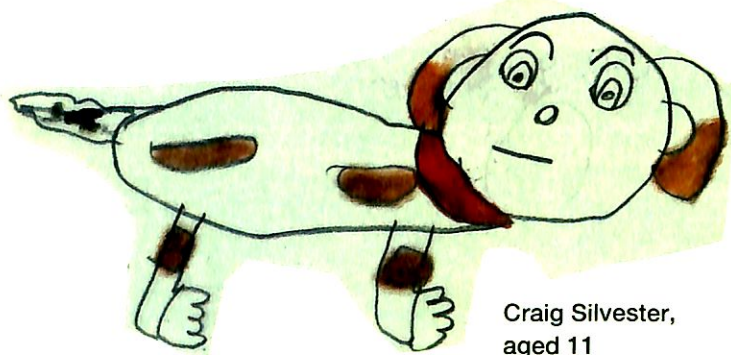

Dear Friends!

You're doing well with the poems and stories. Some of them are real epics!

Joan

Mosquito flies,
Mosquito stops,
Mosquito sees a ripe field of crops.
Mosquito dives,
Mosquito will soar,
The farmer opens his front door.
Mosquito turns
The other way
This is not the farmer's day!
Arghhhhhh!

Fox was chosen as their leader,
Assembly was held,
Right underground,
The birds squawked about it,
He said, "Gather at the hedgerow."
Next morning, they ate and rested,
When it was midnight, they set off,
Owl scouted on ahead,
Down ahead was a swimming pool.

HERE'S AN EXTRACT FROM A STORY BY ELEANOR PASKELL, AGED 9

Suddenly the animals saw a figure coming
towards them ... it seemed to be on all fours. It
was quite big though ... as it came nearer it was
a ... a ... Tiger. "Ahhhh, help!" As soon as they
started to run away the Tiger stopped, "Why
are you running?" said the Tiger. "I only want to
be friends with you." The animals stopped in
astonishment, warily they came nearer. "But a
tiger is fierce, isn't it?" The Tiger replied, "Yes,
but only to enemies, are you an enemy?" "No,
of course not," they said, and the Tiger came
nearer. "What is your name?" said Fox. "Well, to
tell the truth I don't really know my name. I was
taken away from my mother when I was a
young cub, and taken away to this zoo." "Come
on," said Fox, "we are nearly at my den, then
you can introduce yourself - say your name is
Rory." As soon as the animals saw him they
were afraid, but he reassured them and
introduced himself. "My name is Rory," he said.
"Oh, what a surprise," said Vixen.

I EXPECT YOU CAN GUESS WHO CHRISTINA HENDERSON IS MEANT TO BE!

What do you get if you
cross a flea with a rabbit?

Bugs Bunny.

Man: Waiter, this soup tastes funny.
Waiter: Then why aren't you laughing?

Christopher Day, aged 9

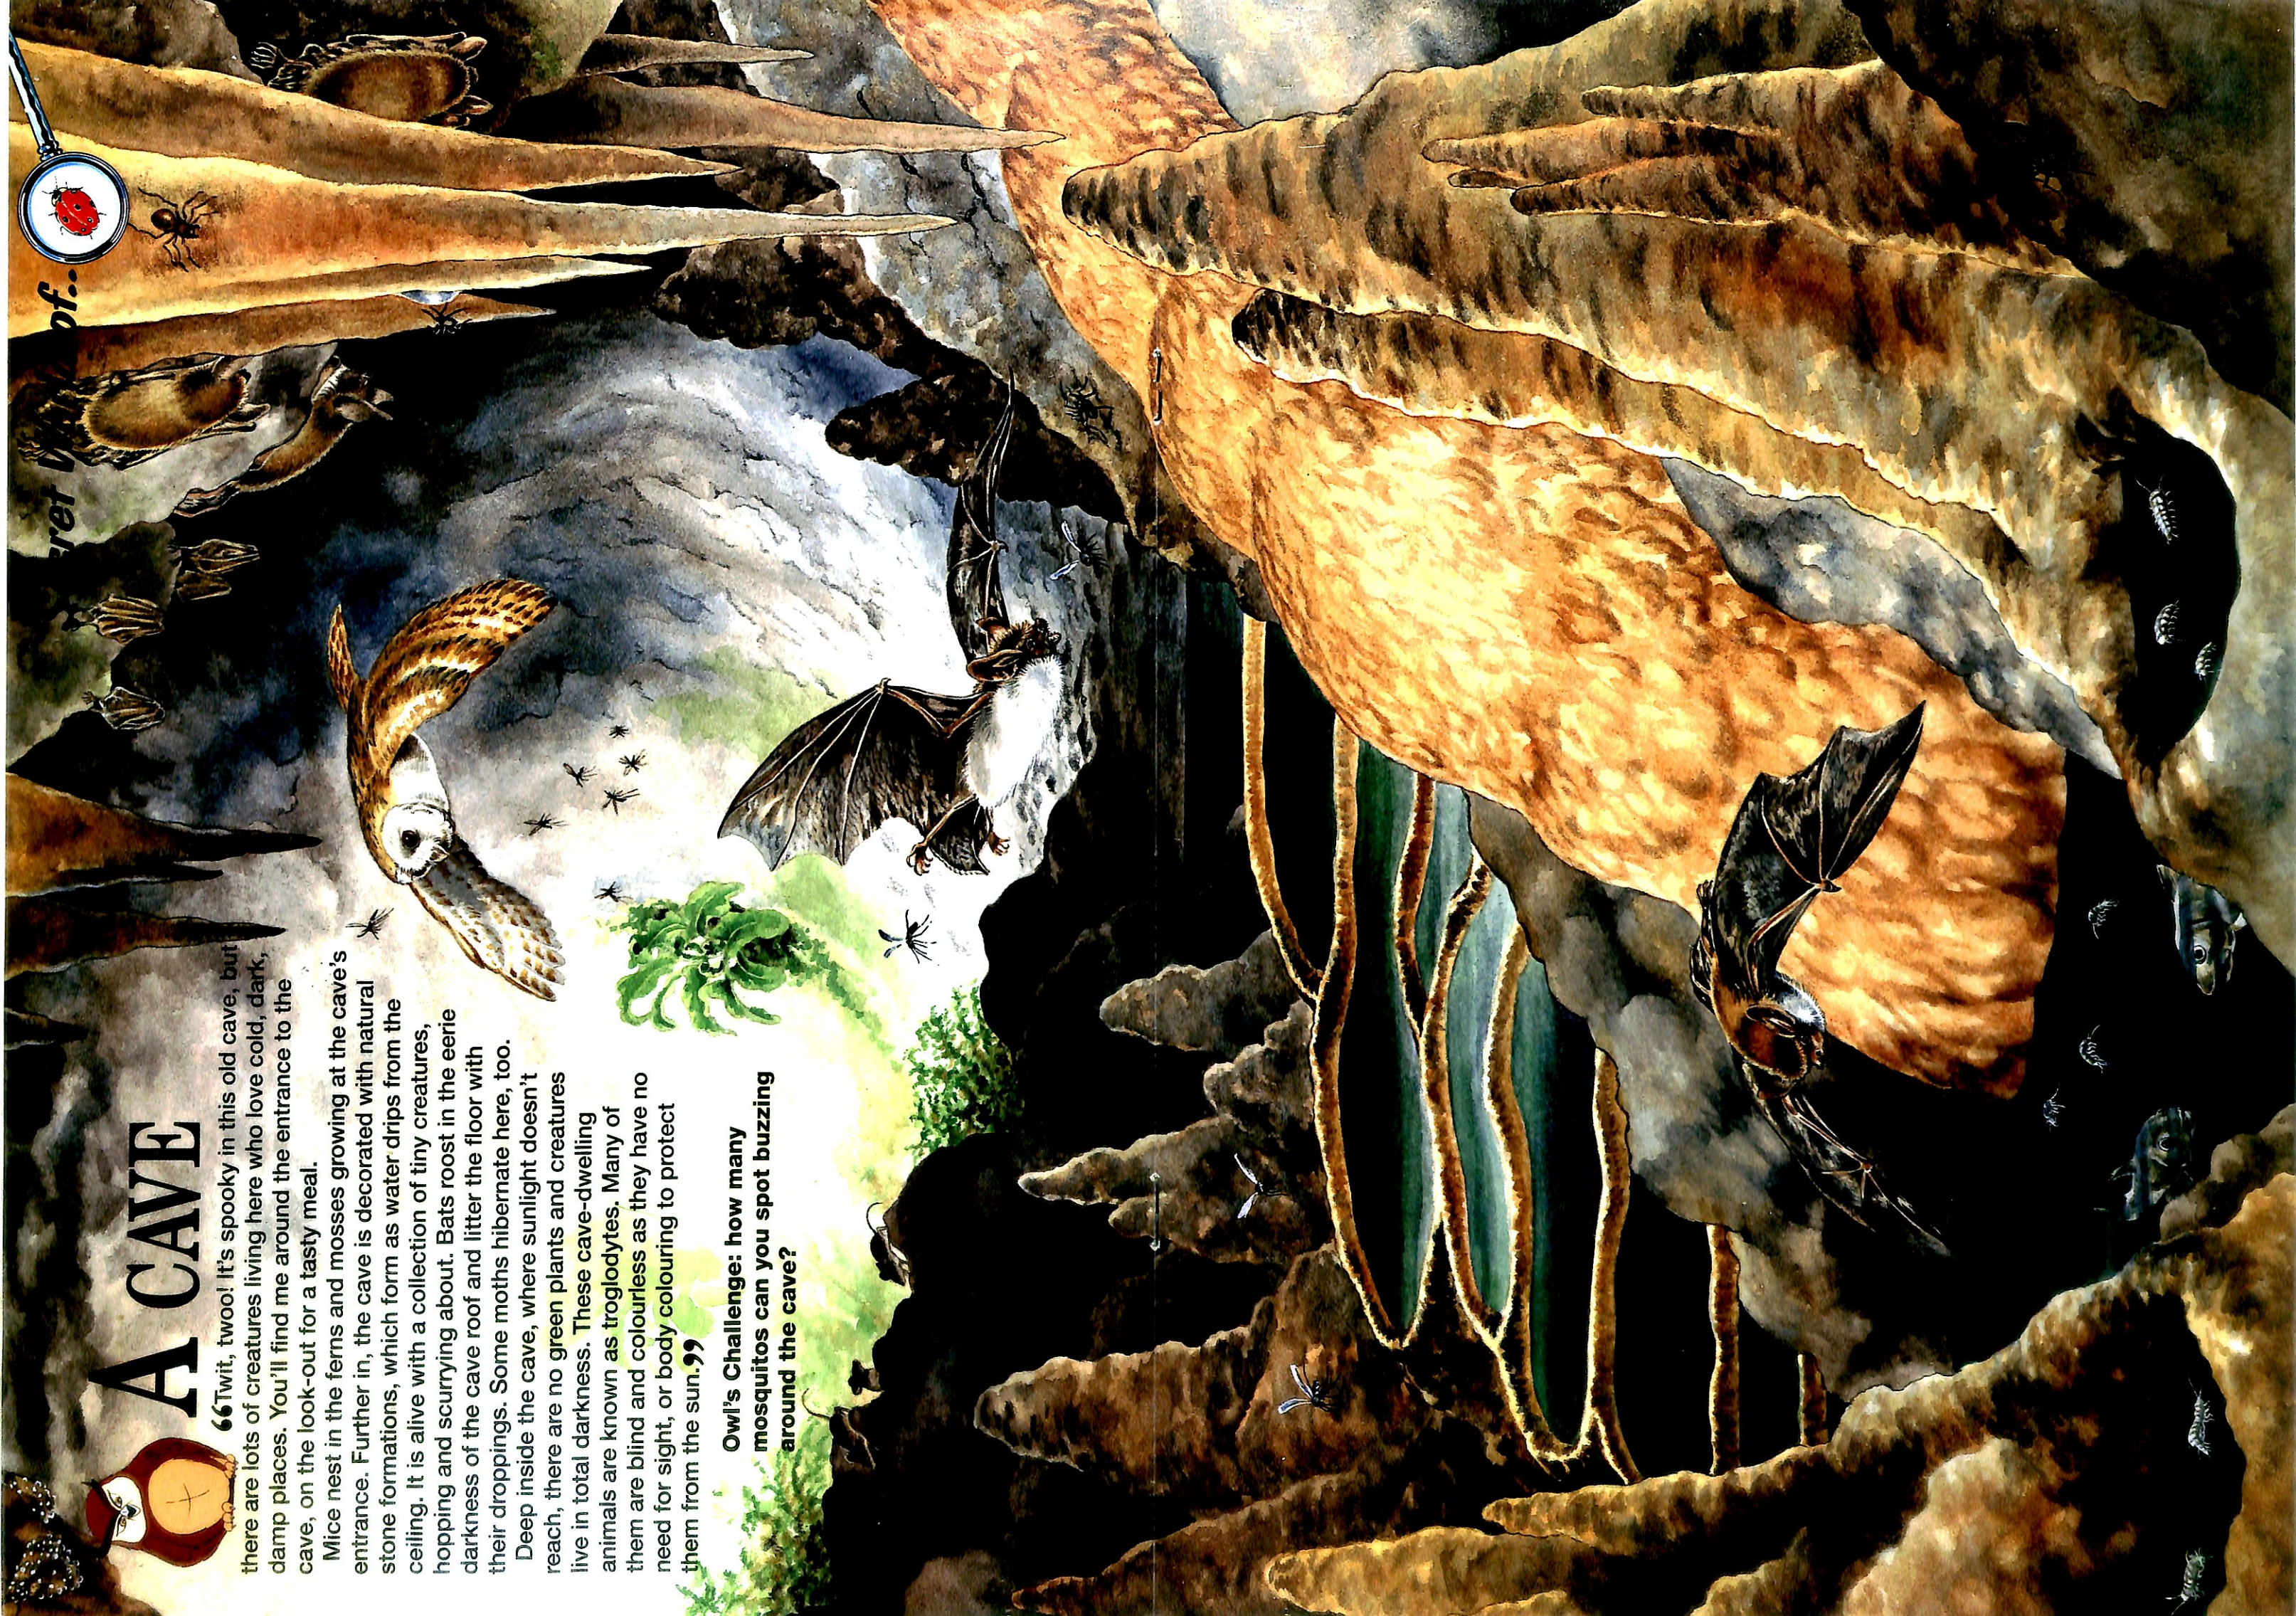

A CAVE

“Twit, twoo! It’s spooky in this old cave, but there are lots of creatures living here who love cold, dark, damp places. You’ll find me around the entrance to the cave, on the look-out for a tasty meal.

Mice nest in the ferns and mosses growing at the cave’s entrance. Further in, the cave is decorated with natural stone formations, which form as water drips from the ceiling. It is alive with a collection of tiny creatures, hopping and scurrying about. Bats roost in the eerie darkness of the cave roof and litter the floor with their droppings. Some moths hibernate here, too.

Deep inside the cave, where sunlight doesn’t reach, there are no green plants and creatures live in total darkness. These cave-dwelling animals are known as troglodytes. Many of them are blind and colourless as they have no need for sight, or body colouring to protect them from the sun.”

Owl’s Challenge: how many mosquitos can you spot buzzing around the cave?

Secret World of...

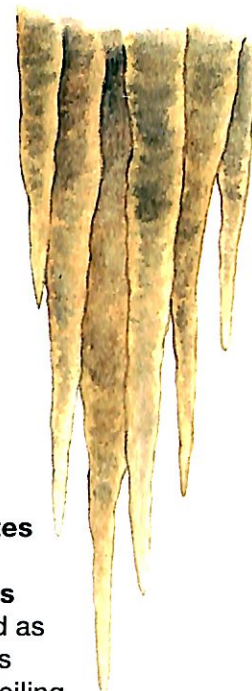

Secret World of.

You should be able to find 11 mosquitos flying through the cave.

With a body smaller than a human thumb, the **Lesser horseshoe bat** is one of Britain's tiniest mammals. It roosts in dark, damp places, hanging alone, or as part of a small group.

Stalagmites and stalactites are formed as water drips from the ceiling of the cave. Each water droplet leaves behind a deposit of minerals. These build up and eventually form a stalactite, which hangs from the ceiling. When the droplets hit the floor they leave further deposits that grow upwards, forming a stalagmite.

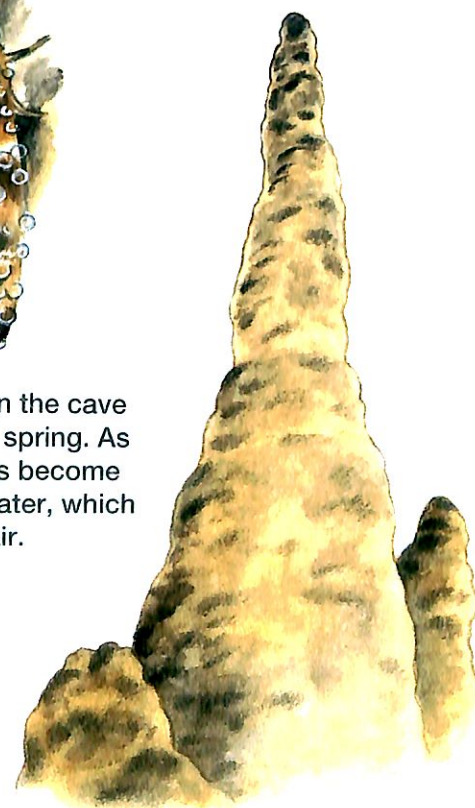

Although not usually found here, **trout** are sometimes washed into cave pools from underground rivers. After living in the dark, with little food available, they appear much smaller, thinner and paler, with enlarged heads and eyes.

The Cave spider lays its eggs in a pear-shaped sac, which it makes from tough silk. It hangs the sac from the wall of the cave and stands guard until the eggs hatch out.

Herald moths hibernate on the cave roof from late autumn until spring. As the weeks pass, their wings become covered with droplets of water, which condense from the damp air.

Pill millipedes live inside the cave close to the entrance. They spend their time scavenging and feeding on bat droppings, which are rich in nutrients.

HALLOWEEN TRADITIONS

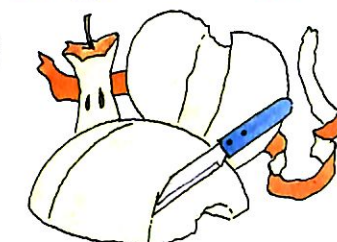

Many everyday thingsss are part of the Halloween festivities – appless, brooms, turnips – even the family pussy-cat! I'm going to tell you about a few of them, but I won't make it too sssscary.

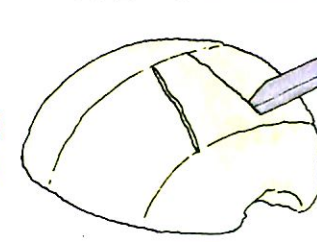

APPLE FACES

Watch this apple face get creepier as the apple shrivels. Ask an adult to help you use the knife.

You will need: large apple, paring knife, cup of salt-water, paint brush.

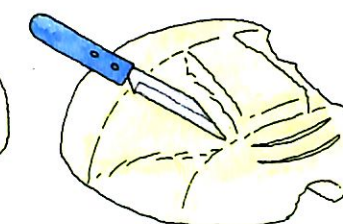

1 Peel and core an apple. Cut it in half and scratch two lines across it to divide it roughly into three.

2 Make cuts for the nose, about 1/2cm deep, down the middle third of the apple.

3 Scoop out hollows for eyes on each side of the nose.

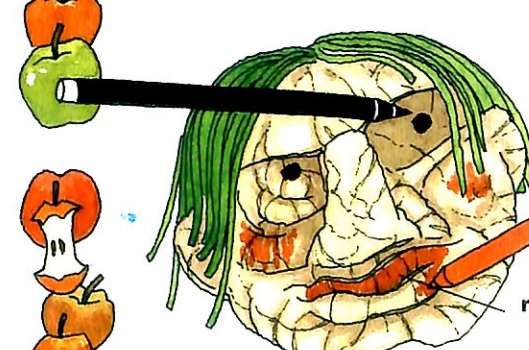

4 Make two short cuts for lips. To make the nose stick out, carve a groove either side of it.

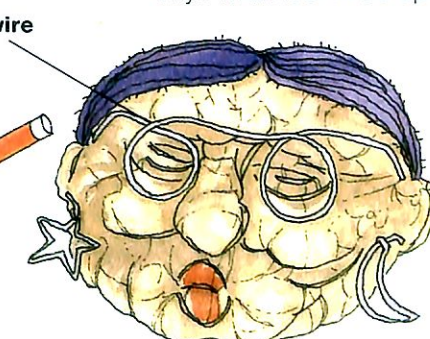

5 Slice off four chunks of apple to make two ears. Round off any sharp corners.

6 Put the apple in a warm, dry place for at least three days while it shrivels up.

fuse wire

red felt tip

leftover wool

Squirrel says
Brush the apple often with salt-water to stop it going brown.

Discovering Nature

Pomona

What do apples have to do with Halloween? Thousands of years ago, the Romans held a huge celebration each autumn in praise of Pomona, the goddess of fruit. They thanked Pomona for the harvest by offering her apples and nuts. Ever since then, apples have been an important part of Halloween.

WITCH'S BROOM

If you can't make this fly, you could always use it to help sweep up in your garden or yard.

You will need:

old broom or mop handle, long twigs, 2cm-thick wooden peg (about 10cm long).

1 When you're out on walks, collect long, bendy twigs for your broom head. Try and find ones that are roughly the same length (about 50cm).

2 Cut down an old broom handle to about 1m, or however long feels comfortable for you. Hold your twigs against the handle so that they stick out at least 10cm below the bottom of the handle. Then mark a spot on the handle about 6cm down from the top of the twigs.

3 Drill a 2cm hole through the handle at this point. Push a wooden peg through (you may need to hammer it), so that it sticks out an equal amount on each side.

Ask an adult to help you with steps 2 and 3.

4 Hold the twigs round the handle again, and bind the twigs to the handle with cord, as shown.

5 When the twigs are held securely, cut the cord and tie it to the peg with a strong knot.

Apple games

Apples are said to possess special powers on Halloween ...

PIPPY PROSPECTS

Do you believe that you can tell your future from an apple? Some people do!

Cut an apple in half. Keep half for yourself and give the other half to a friend.

Count the pips, then read what they tell you about your future.

A trip across the ocean

You'll live to a ripe old age

Fame

Your wishes will come true

An early marriage

Great wealth

An inheritance

WEDDING BELLS

Peel an apple very carefully, so that the peel comes off in one long, winding piece.

Swing the peel over your head three times, saying, "Paring, paring, long and green, Tell my fate for Halloween."

Drop the peel behind you. If it makes the shape of a letter, that letter is said to be the first initial of the person you will marry.

CATVERSATION

In one English village, a long time ago, it was said that elves rode on the back of the villagers' cats one Halloween. After that, the villagers locked their cats up on Halloween so that the elves couldn't get at them.

Play this silly cat game where every sentence of your conversation has to have the word 'cat' in it somewhere.

DARK SHADOWS

Scare yourself and your friends (but not too much) with these shadow puppets.

You will need:

thin card, sticky tape, torch, pencil, scissors, pea sticks or thin bamboo canes, tracing paper.

1 Trace the templates on to thin card and cut them out.

2 Tape each puppet to a pea stick.

3 Turn on your torch, turn off the lights and you're ready for some scary puppet theatre. Ask a friend to hold the torch while you move the puppets around, keeping them in the torch beam so they make shadows on the wall.

Why did the witches go on strike?
They wanted electric brooms.

I'm going to CATch the bus into town this afternoon.

Really, are you going to the CATtle market?

No, I'm going to the chemist to get something for my CATarrh.

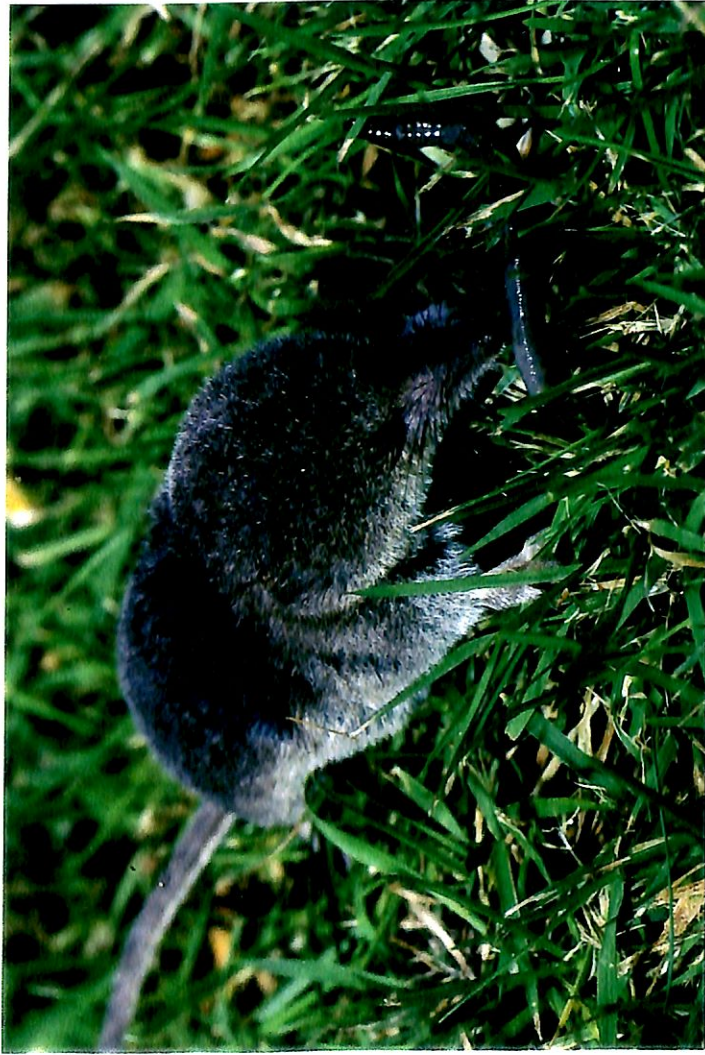

You're such a sCATter-brain - I bet you miss the bus.

And so on. The first person who can't think of a 'cat' sentence, is out.

WORLD NEWS...WORLD NEWS...WORLD NEWS...WORLD NEWS...

SHOCKING NEWS

by Fox

Local park residents were today mourning the death of one of their friends, the Shrew. "He'd always suffered terribly with his nerves, he'd jump at any loud noise," said a close friend. "Then, yesterday, when a great clap of thunder struck, the shock was too much for him. He literally

died of fright from the noise." Experts on the scene reported that it was indeed a heart attack that killed him. The fright caused by the thunderstorm had pushed his heart rate up to 1200 beats per minute, which is 20 beats per second! He will be sadly missed by his friends.

FASHION

by Pheasant

While researching warm, winter wear for the coming season, I met a Tibetan yak who lives high up on the mountain-sides of the Himalayas. It really is freezing up there. I certainly couldn't stand it for long, but the yak's thick, winter coat really helps. The dark colour soaks up heat from the sun and the long, shaggy hair keeps the body heat in. Mind you, I wasn't surprised when I later heard that this isn't the only way the yak keeps warm. It also has its very own central heating system. It eats moss, which heats up as it is digested in the yak's stomach, warming the yak from the inside, too!

BUSH BABY BLUES

Evening Extra by Badger

Earlier today, woodland folk were puzzled by a strange whistling sound they heard coming from a bush. Just as investigators started to poke around inside, a mother hedgehog came rushing over. "Oh my goodness," she said, "please be careful. I'm sure that's my baby in there." Close behind her were a string of babies. One of them explained, "Because we follow mother in a line, one of us sometimes gets lost. But then we whistle and mother soon tracks us down." Sure enough, with one more poke, out popped the missing baby. He was reunited with his family and everyone was happy.

Garden Magic

by Mrs Rabbit

At this time of year, when few plants are in flower, it is nice to have a bit of greenery in the garden. Many plants have very attractive leaves and some even change colour in the autumn. But if you have a small garden, there is one plant you really should avoid – the Raffia palm. This isn't the tallest plant in the world, but it does have the largest leaves. They can measure up to 20m in length and grow upwards. The leaves alone are often taller than most trees. So if you're stuck for space, this plant is not for you!

▼ The Nile is the longest river in the world, winding its way through Egypt, Sudan, Uganda and Tanzania.

WHISTLER'S WEATHER

Now that autumn is upon us, I often wake up to find the park covered by a veil of morning mist. But this mist is nothing compared to the thick fogs that used to descend on London. These were called 'pea soupers', because the fog was coloured greenish yellow by smoke pollution from coal fires and factories.

The worst 'pea souper' was in December 1952, when 4000 people died from bronchitis and pneumonia, brought on by the freezing fog.

HALLOWEEN

The moon was full as Bold, Shadow and Crow made their way through White Deer Park. The night was still and every sound seemed louder than usual.

"It feels eerie tonight – as though something is going to happen," said Shadow.

"That's because it's Halloween," replied Bold.

A moment later, a bat flitted by and, at the same time, there was a loud screech. Shadow nearly jumped out of her skin.

"It's only Owl hunting!" Crow gave a loud cackle.

"No, it's not!" cried Badger, pointing. Crow turned – and there in front of him pranced a ghost!

"Let's catch it!" yelled Bold. The ghost flew off with the three friends trailing behind.

STARS IN THE SKY
Which star in the sky is exactly the same as A?

WHO IS IT?

Which creature is dressed up as a ghost? To find out, write down the first letter of each object. You can make the name of one of the Farthing Wood Friends from some (not all) of these letters – do you know which creature it is?

"We'll never catch it!" puffed Shadow. But Bold and Crow had gone ahead. Bold drew closer to the flapping ghost – and then he pounced. The sheet came off to reveal – guess who?

"It was only a joke!" giggled the creature. "And I had you fooled for a while, didn't I!"

The others just laughed with relief. "I've had enough of Halloween," said Shadow. "Let's all go to my house for a lovely hot drink." And that's exactly what they did.

BATTY BATS
Can you find eight bats hidden in the picture?

CROSS NUMBER

BOO!

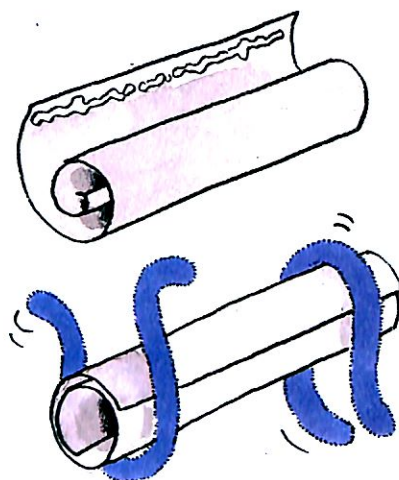

FLAPPING BAT

Fly your flapping bat across a dark room and scare your friends!

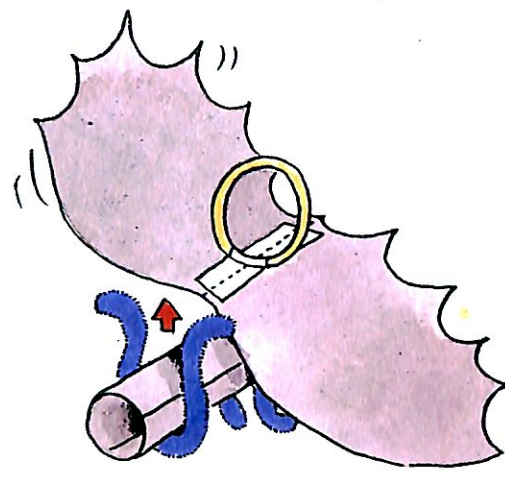

You'll need a sheet of thin black card, black paper about 7 x 3 cm, 2 pipe cleaners, a small curtain ring, 8m thin nylon thread, pencil, glue, sticky tape and scissors.

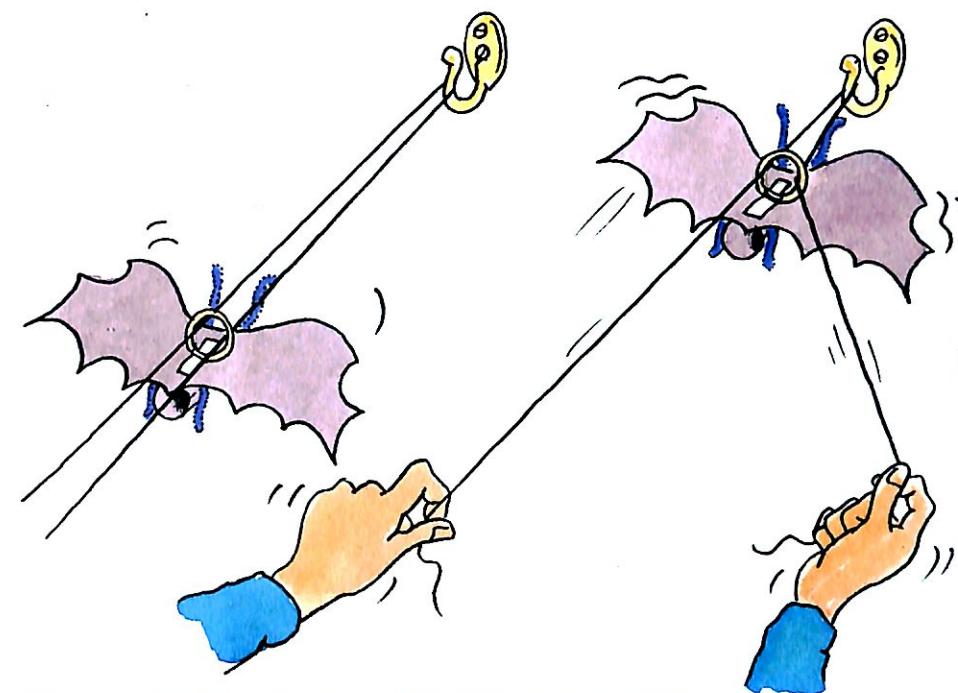

1 Fold the card in half and draw a bat wing on one side. Cut out the shape but leave the folded edge.

2 Make the body by rolling the paper into a tube. Glue the edge. Bend and glue a pipe cleaner at each end for ears and legs.

3 Put the curtain ring upright in the middle of the wings and fix with sticky tape. Glue the wings to the body.

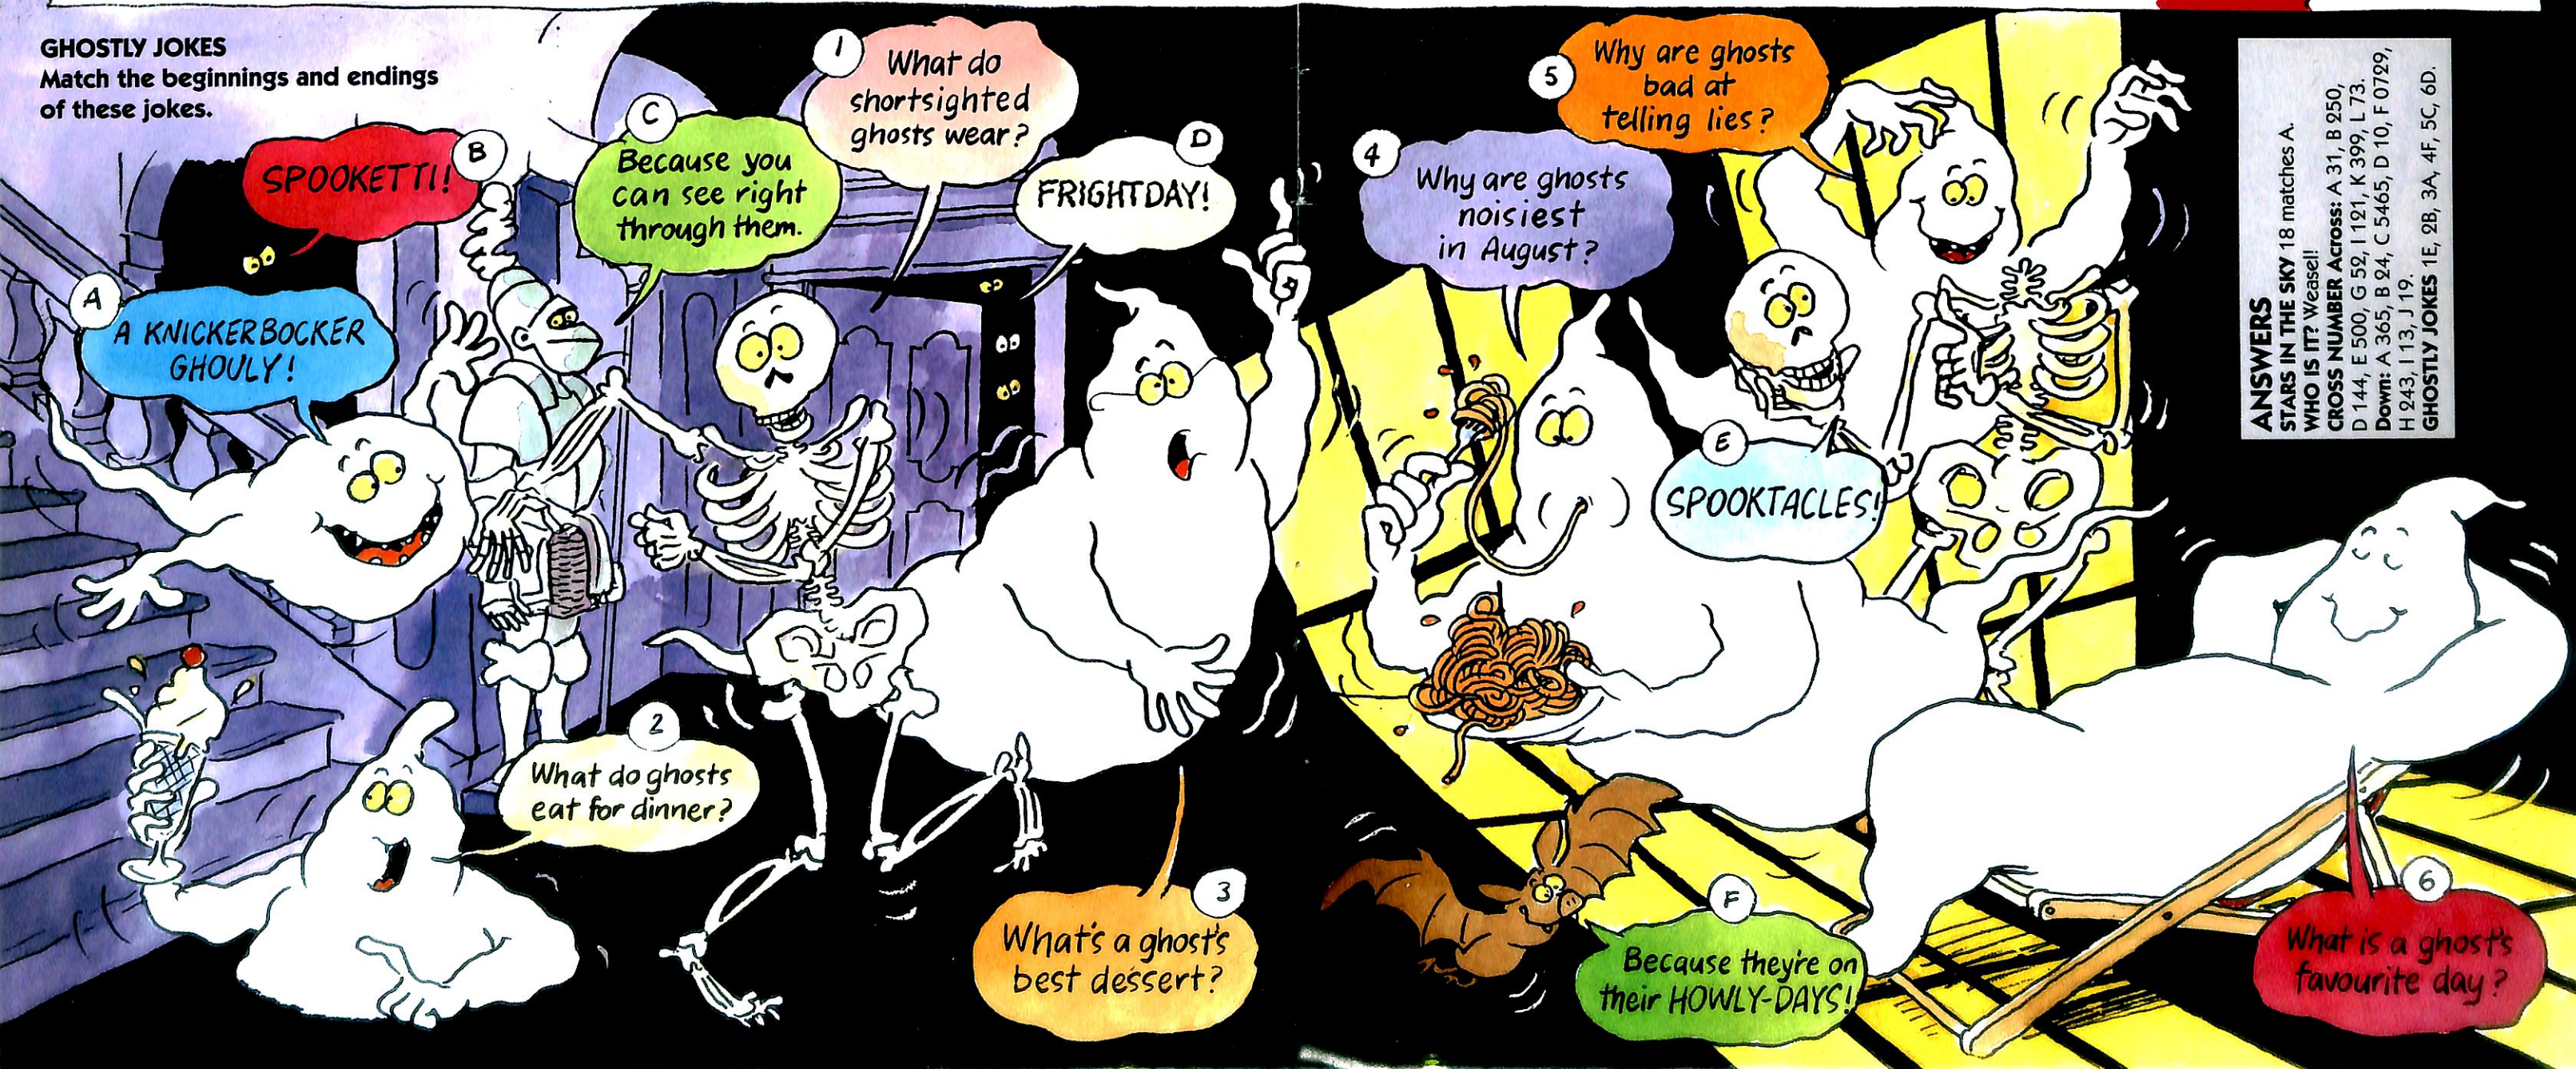

4 Put the middle of the nylon string on to a hook on the back of your door. Slide the ends of the string through the curtain ring.

5 Hold one end of the string in each hand. Let the bat slide to your hands. Then quickly pull the strings apart – and watch the bat whizz to the door!

GHOSTLY JOKES

Match the beginnings and endings of these jokes.

ANSWERS
STARS IN THE SKY 18 matches A.
WHO IS IT? Weasel!
CROSS NUMBER ACROSS: A 31, B 250,
D 144, E 500, G 52, I 121, K 399, L 73.
DOWN: A 365, B 24, C 5465, D 10, F 0729,
